

# Cumulon Protocol

A DeFi protocol based on the liquidity of Parachain staking

## Problems

There is no tool to manage the staking asset cross-chain.

The experience of staking/unstaking through Polkadot.js is not user-friendly.

✓ The staked liquidity is not totally unlocked from the perspective of the community and ecosystem.

## Solutions

#### **Cumulon management tools**

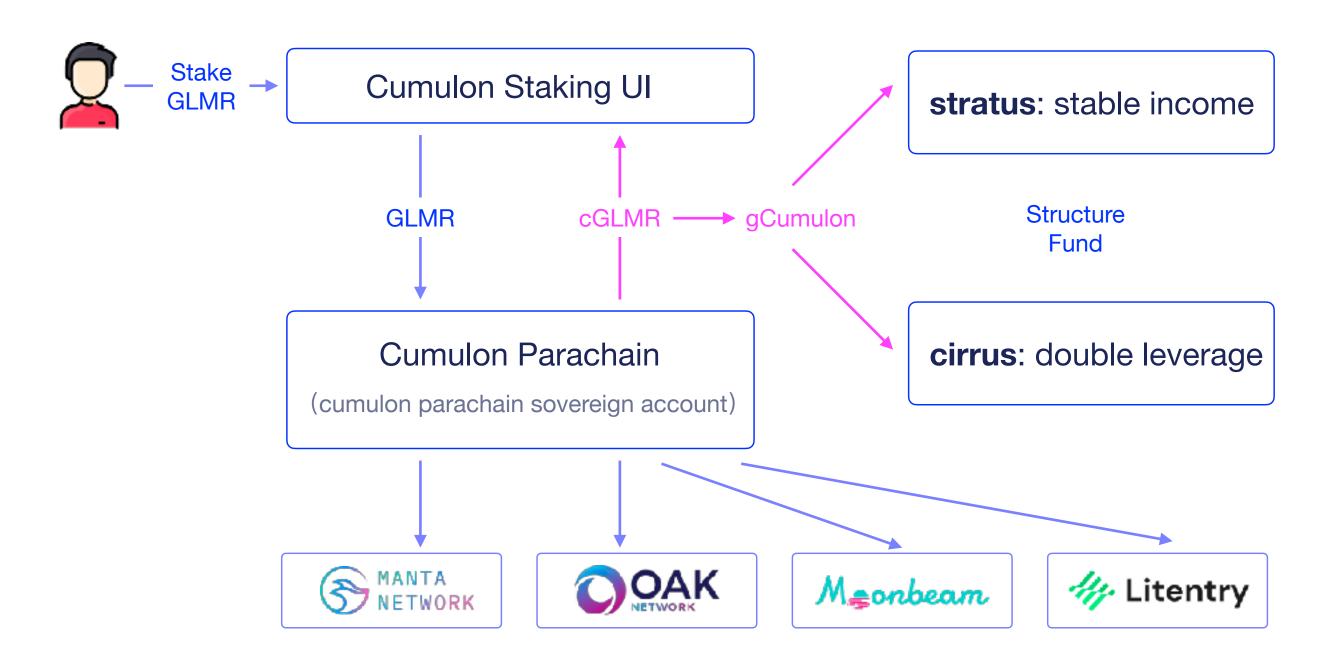

All in one tool: stake, unstake.

Rich data for different parachain related to staking, the first product within the Polkadot ecosystem.

Not only historical data, Cumulon management tools also provides the prediction function.

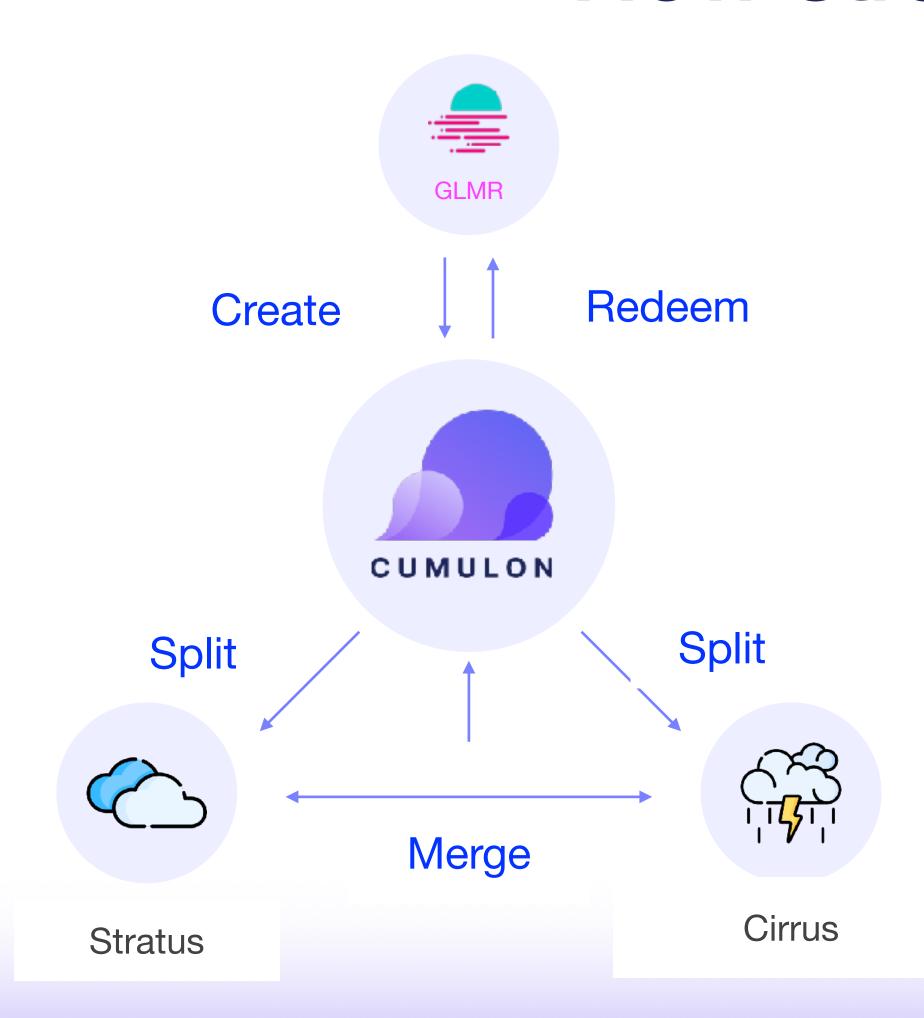

03

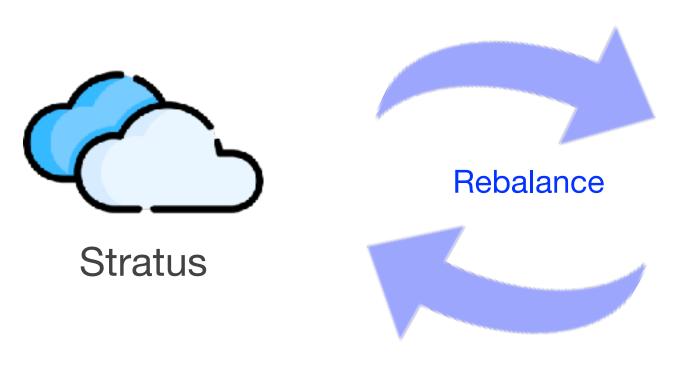

Cumulon structure fund

## How structure fund works

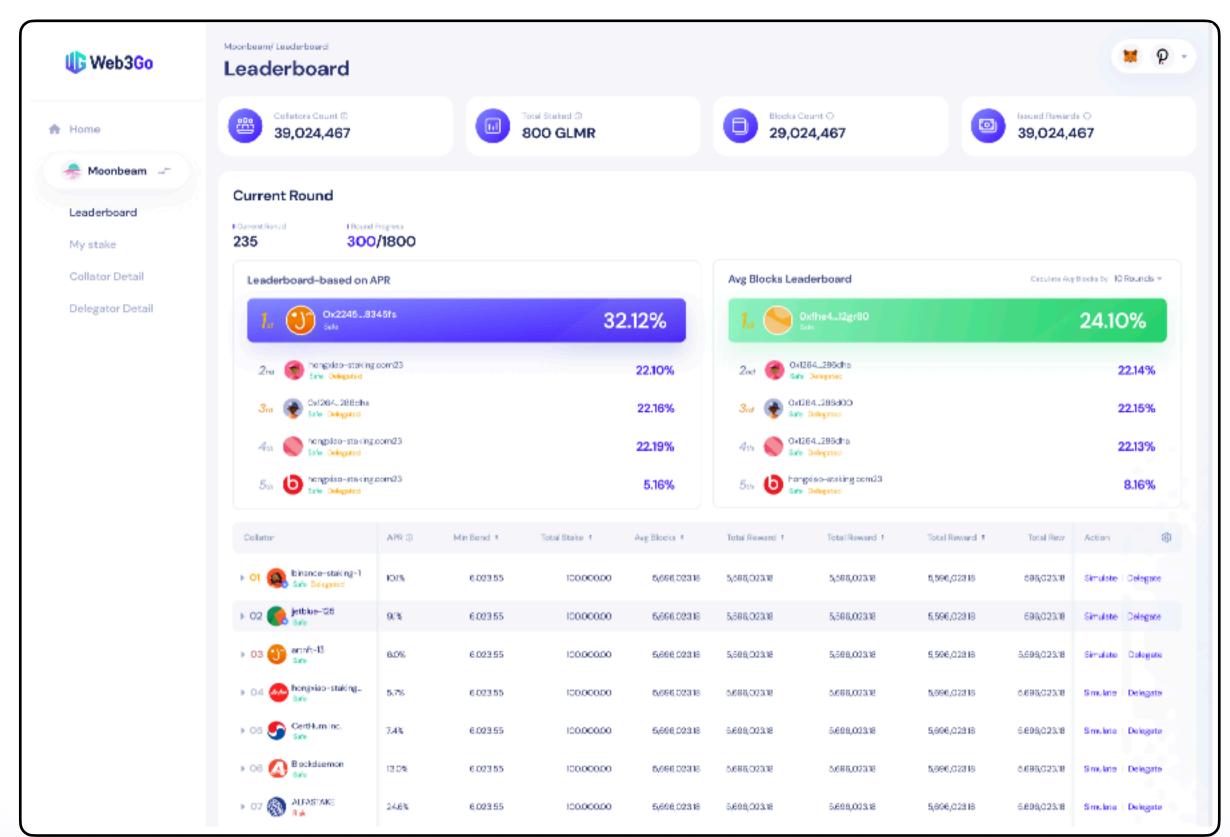

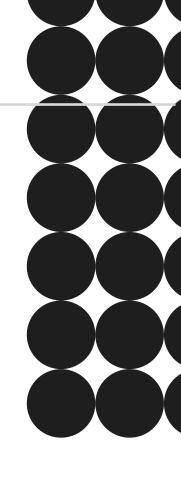

## Benefits for the community and ecosystem

- 1. Community can stake/unstake the liquidity in one website for different parachain!
- 2. Community can view the top collator, top delegator, APR across different parachain, historical data and other rich data!
- 3. Staking through the Cumulon protocol and participating in the structured fund can maximize the returns. (staking return + protocol returns)

## Roadmap

2023 Jan

Staking management tool for Parachains: https://cumulon.cloud
