The Slaying Gragons

A unique handmade 100 piece pixel series. Which weapon will your dragon wield?

For example, user A wants to send NFTs to a fixed address on a fixed time every week. He may set once without sending every time. Another example, user B needs to send NFTs tomorrow 8:00 am. He may set this transaction at any time ahead.

Support DID
passport in the metaverse

Dotconnect DID is an identity data aggregator, powered by smart contract, NFT and privacy protection decentralized protocol, to provide identity services to Web3 users.

Dotconnect DID wants to gather people together to build a Dao to construct the DID area.

No Main-Net Gas Fee

on going

One swap without exchanging main-net tokens as gas fee in advance.No matter what token the user has, he can trade successfully on any chain.

For example, user A wants to buy an NFT on ethereum, but only has BNB. He can still trade successfully by paying BNB as gas fee because, meanwhile, we have exchanged BNB to ETH as gas fee behind.
